What do you call numbers such as \$100, 200, 500, 1000, 10000, 50000\$ as opposed to \$370, 14, 4500, 59000\$ Ask Question Asked 14 years ago Modified 9 years, 7 months ago

How many integers are there between \$1,000\$ and \$10,000\$ divisible by \$60\$ and all with distinct digits? I know that there are \$8,999\$ integers in total, and \$\lfloor \frac{10000}{60} \rfloor - \lfloor \frac{1000}{60} \rfloor\$...

In pure math, the correct answer is \$ (1000)_2 \$. Here's why. Firstly, we have to understand that the leading zeros at any number system has no value likewise decimal. Let's ...

I would like to find all the expressions that can be created using nothing but arithmetic operators, exactly eight \$8\$'s, and parentheses. Here are the seven solutions I've found (on the Internet)...

1 the number of factor 2's between 1-1000 is more than 5's.so u must count the number of 5's that exist between 1-1000.can u continue?

0 Can anyone explain why \$1 \text{ m}^3\$ is \$1000\$ liters? I just don't get it. 1 cubic meter is \$1 \times 1 \times 1\$ meter. A cube. It has units \$\text{m}^3\$. A liter is liquid ...

The way you're getting your bounds isn't a useful way to do things. You've picked the two very smallest terms of the expression to add together; on the other end of the binomial expansion, ...

It means "26 million thousands". Essentially just take all those values and multiply them by \$1000\$. So roughly \$26\$ billion in sales.

Hence, I am looking for helps to find a closed formula for the binomial expansion by simplifying \$(1+1)^n\$
