Inverters, which convert DC power to AC power, also rely heavily on MOSFETs like the 20N60 . Solar inverters, UPS (Uninterruptible Power Supply) systems, and even some ...

OverviewPayment for injected powerOperationTypesDatasheetsExternal linksA grid-tie inverter converts direct current (DC) into an alternating current (AC) suitable for injecting into an electrical power grid, at the same voltage and frequency of that power grid. Grid-tie inverters are used between local electrical power generators: solar panel, wind turbine, hydro-electric, and the grid. To inject electrical power efficiently and safely into the grid, grid-tie inverters must accurately ma...
