-----  
Are white PC components more expensive?

While white PC components do sometimes go on sale, they're often more expensive than their black counterparts. For example, I just checked on Overclockers UK and Amazon and quickly found a number of cases where white hardware is more expensive:

Why are white PCBs so expensive?

Producing all white plastic and PCBs is actually harder than other colors, due to the pigments and manufacturing process involved. While white PC components do sometimes go on sale, they're often more expensive than their black counterparts.

Why is the White PC building market so expensive?

As a result, the white PC building market is always in a position of stable demand but constrained supply: i.e. there is a much more limited supply of all-white hardware to choose from. This means that white components are naturally more expensive.

Do you prefer white or black builds?

white = shows colours better black = cheaper I have always liked black builds a little bit more. Also kind of biased towards white components because of how ridiculously expensive they are. Have you looked at the prices recently? For cases anyway. I like black systems better, just personal preference. I think they look better.

Why Are White PC Cases and Coolers More Expensive Than Black Ones? If you've been shopping around for PC cases or AIO ...
