What equipment is used in mining?

Mining also often takes place in remote locations miles away from the nearest town. Air Compressors and Low-pressure Blowers are two key pieces of equipment that are used to power mining processes. Listed below are some of the many applications in the mining industry where compressors and blowers are essential for peak operational efficiency.

How does low pressure air help in mining?

Material Handling. Safely handling coal dust and other fine materials is important in mining, which is helped by low-pressure air. Two ways low-pressure air assist in this: fluidization, which occurs by mixing these materials with compressed air; and low-with conveying material throughout the mining process.

What tools are used in mining?

Tools and Instruments - Pneumatic tools used in mining require clean and dry air (provided by air compressors) in order to work. This ensures that drills, pneumatic loaders, saws, wrenches, pneumatic loaders, and other key pieces of equipment function without issue. The same applies to mining instruments!
