With battery allocations halved and discharge requirements raised to six hours, developers warn the economics of storage projects may weaken, threatening Japan's ability to ...

With battery allocations halved and discharge requirements raised to six hours, developers warn the economics of storage projects ...

BEIJING--A revamp of China's electricity market is boosting the economics of storing power just as international demand surges, sparking a boom for the Chinese energy ...

Solar power has become the largest source of clean energy in Japan this year. Interest among households has been strong, with more ...

Solar power has become the largest source of clean energy in Japan this year. Interest among households has been strong, with more than 3mn residential solar systems ...

Chinese renewable generation reached 366 terawatt-hours (TWh), making wind and solar the country's largest sources of new power. This transformation has also driven the ...

China's dominance in solar and battery production poses challenges for Japan's energy transition, as the country reviews its energy plan amid calls for increased renewable use.

This has allowed China to produce solar panels and batteries at costs significantly lower than competitors, causing some Japanese and European companies to either go ...

By reducing dependence on critical mineral imports, Japan is enhancing its energy security and diversifying its battery supply chain, ...

As of March, Japan had 0.23 GW of grid-connected BESS, according to METI. By comparison, China has 75 GW and the U.S. has installed nearly 26 GW of battery storage ...

China already has the world's largest battery energy storage fleet - some 40% of the global total - driven in part by local government mandates for developers to add storage to ...

Production of solar panels, electric vehicles and batteries have all benefited from state support, while Chinese companies, including state-owned enterprises, have become the ...

Production of solar panels, electric vehicles and batteries have all benefited from state support, while Chinese companies, including ...

By reducing dependence on critical mineral imports, Japan is enhancing its energy security and diversifying its battery supply chain, which could reshape global energy storage ...

As of March, Japan had 0.23 GW of grid-connected BESS, according to METI. By comparison, China has 75 GW and the U.S. has ...
