Onsite solar is an asset located where the renewable energy generated will also be consumed. There are three main types of onsite solar: rooftop, ground-mount, and carport.

To achieve sustainability goals while meeting the increasing electricity demands of electrification, organizations are pairing on-site solar PV generation with on-site energy storage.

Reduce utility costs, achieve energy independence and meet sustainability goals with renewable on-site solar power-and even sell surplus energy back to the grid.

It involves the deployment of solar panels or photovoltaic (PV) modules on rooftops, parking lots, or other available spaces on the property. On-site solar installations can vary in size, from ...
