Why do we need energy storage solutions?

As the global energy transition accelerates, the need for reliable, scalable and cost-effective energy storage solutions has never been greater.

Are batteries the future of energy storage?

The International Energy Agency (IEA) says batteries will make up 90% of the sixfold increase in global energy storage capacity through 2030, while 1,500GW is estimated to be available by the end of the decade. This growth is led by falling costs, innovations in technology, and favorable policies to mitigate the emissions of greenhouse gases.

Are battery energy storage systems essential grid infrastructure?

Battery energy storage systems (BESS), once seen as promising add-ons to renewables, are now considered essential grid infrastructure--tested during blackouts, storms, and surging demand curves. One of the clearest trends shaping this change is the prioritization of availability over capacity.

Will energy storage capacity expand by 2030?

According to the International Energy Agency (IEA), to meet the increasing global energy demand, storage capacity must expand to 1,500 gigawatts (GW) by 2030. It also projects that 90% of this should come from batteries alone. However, current trends in the energy storage industry are creating a different picture.

Explore 10 new energy storage companies from 2.8K+ entrants, advancing the industry with flywheel energy storage, underground batteries, micro-channel-based hydrogen storage & more.

These startups develop new energy storage technologies such as advanced lithium-ion batteries, gravity storage, compressed air energy storage (CAES), hydrogen storage, etc

This article discusses 10 energy storage companies that are working on emerging solutions to support global

energy needs. Find out more about innovations, industry players, and factors ...

For instance, a firm might specialize in advanced battery solutions, pumped hydro storage, or thermal energy storage systems specifically tailored for solar and wind power ...

As we ride this storage tsunami into 2026, remember: the energy transition isn't just about saving the planet - it's about making your portfolio bulletproof. The question is: ...

Can US trade policy deliver a domestic battery supply chain? Building US domestic energy storage manufacturing capacity will require more than limiting foreign participation, ...

Latest news on energy storage projects, BESS, capacity expansion, and regulatory updates across Europe, US & Canada, Latin America, and Asia Pacific. Discover how energy ...

Companies that deliver sub-3-minute response times and full-stack support are setting a new bar for what "operations" means in energy storage. Looking ahead, BESS deployments are ...

Explore 10 new energy storage companies from 2.8K+ entrants, advancing the industry with flywheel energy storage, underground batteries, micro ...

Here are ten notable innovations taking place across different energy storage segments, as highlighted in GlobalData's Emerging Energy Storage Technologies report.

Can US trade policy deliver a domestic battery supply chain? Building US domestic energy storage manufacturing capacity will require ...

Leading innovators are transforming solar and wind potential into reliable power with scalable, next-gen energy storage technologies.

Here are ten notable innovations taking place across different energy storage segments, as highlighted in GlobalData's Emerging ...
