West Virginia's old steel mill has a new lease on life, producing innovative batteries that could change how we store renewable energy.

Massachusetts-based energy storage developer Form Energy will build an 85 MW/8.5 GWh iron-air battery system at a former paper ...

Form Energy is developing iron-air batteries, a new type of energy storage that uses abundant and eco-friendly materials like iron. ...

California start-up Inlyte Energy has announced a key milestone in the development of its long-duration iron-sodium battery technology, completing a factory ...

Form aims to produce iron-air batteries on a large scale and integrate them into our electric grid, to provide long-term storage for ...

Iron batteries, using common and safe materials like iron and air, promise a more environmentally friendly and scalable solution for energy storage, with the capability to store ...

The Cambridge Energy Storage Project in Cambridge, Minnesota will be the first commercial deployment of iron-air battery technology. Developed by startup company Form ...

Form aims to produce iron-air batteries on a large scale and integrate them into our electric grid, to provide long-term storage for energy generated from renewable sources.

Massachusetts-based energy storage developer Form Energy will build an 85 MW/8.5 GWh iron-air battery

system at a former paper and tissue mill in rural Maine. The ...

Form Energy aims to commercialize an iron-air battery system that can "store electricity for 100 hours at system costs competitive with legacy power plants," the company ...

These innovative CO2 batteries from Energy Dome promise long-duration energy storage for the grid, and reliable 24/7 clean power for data centers.

Form Energy is developing iron-air batteries, a new type of energy storage that uses abundant and eco-friendly materials like iron. These batteries work by a process called ...

Form Energy aims to commercialize an iron-air battery system that can "store electricity for 100 hours at system costs competitive with ...

Those storage systems, which will use cheaper lithium iron phosphate batteries, will be used to power data centers and help buffer demand on the electric grid.
