How does tariff risk affect a battery energy storage system (BESS) project?

Mitigating tariff risk in battery energy storage system (BESS) projects is crucial for ensuring project financial viability, as tariff changes can significantly affect cost structures and overall project economics.

How will tariffs affect energy storage costs?

Tariffs on imports from China are expected to greatly affect energy storage costs, and a 90-day pause in mid-May gave the industry a temporary reprieve. The Wood Mackenzie report notes that the United States is heavily dependent on battery cells to serve the burgeoning market for utility-scale battery energy storage systems.

Which international trade issues will remain a concern for energy storage projects?

Two major areas of international trade that will remain causes of concern for energy storage projects are the application of tariffs and supply chain integrity.

Where can I find energy storage industry data?

It is available individually each quarter or as part of an annual subscription. The quarterly reports from ACP and Wood Mackenzie are routinely cited by hundreds of media outlets as the authoritative source of energy storage industry data.

Short-term headwinds will drive modest contractions in 2026-2027, yet Wood Mackenzie's latest forecast projects nearly 93 GW of new storage through 2029, cementing ...

Discover proven strategies to cut import costs on high-value battery components like cathodes and cells using FTZs, duty deferral, tariff inversion, and 3PL bonded operations. ...

Tariffs and funding overhauls by the Trump administration ...

According to research firm Wood Mackenzie's new report, "All aboard the tariff coaster: implications for the US power industry," tariffs on imports will affect battery storage ...

Suppliers of battery energy storage systems (BESS) are beginning to set up shop in U.S., primarily driven by proposed Section 301 tariff increases on Chinese imports, the ...

Tariffs on imports from China are expected to greatly affect energy storage costs, and a 90-day pause in levies, in mid-May, gave the ...

The U.S. Energy Trade Dashboard provides annual, HS -10 level trade data on U.S. exports (Schedule B) and imports (HTS) of primary energy, energy equipment, and materials for ...

A recent Wood Mackenzie report examines two possible tariff scenarios and concludes that costs will skyrocket for both utility-scale solar development and battery energy ...

According to research firm Wood Mackenzie's new report, "All aboard the tariff coaster: implications for the US power industry," tariffs on ...

Recent tariff policies are set to increase the cost of power generation technologies, with energy storage seeing the biggest hike due to its dependence on Chinese imports, ...

Two major areas of international trade that will remain causes of concern for energy storage projects are the application of tariffs and ...

Tariffs and funding overhauls by the Trump administration are set to raise energy storage prices and hit short term deployment as domestic manufacturing capacity falls short. ...

Two major areas of international trade that will remain causes of concern for energy storage projects are the application of tariffs and supply chain integrity.

Tariffs on imports from China are expected to greatly affect energy storage costs, and a 90-day pause in levies, in mid-May, gave the industry a temporary reprieve.

A recent Wood Mackenzie report examines two possible tariff scenarios and concludes that costs will skyrocket for both utility-scale ...
