Fiji Fiji is an image processing package -- a 'batteries-included' distribution of ImageJ, bundling many plugins which facilitate scientific image analysis.

After starting Fiji, verify that QuickTime for Java is installed by selecting 'Plugins > LOCI > LOCI Plugins Configuration', then choosing the 'QuickTime for Java' entry in the list ...

Pressing Ctrl+O or navigating to the 'Open' action in the 'File' header causes Fiji to crash or close. Going to 'Import' -> 'Open with Preview' still works. Information about your ...

1 Introduction ImageJ is an open source image analysis program. The program provides a plugin framework for adding custom functionality. There are many analysis routines ...

I get the following exception when I copy the Red_And_Blue.java plugin included with ImageJ into Fiji.app/plugins and try to compile it in Fiji using Plugins>Compile and Run.

Seems like Fiji thinks it is very helpful if it re- autoscales the image we just unscaled. The workaround is frustrating, in the Brightness and Contrast - Set display range I ...

For opening these files by dragging them into Fiji or selecting them via Bio-Formats Importer I use the following settings: Hyperstack; Open Files Individually; Color mode: Default; ...

Hello I am trying to run a batch process using a macro in ImageJ (using the Fiji version) and I get a Java warning when I try to batch save. The warning is a pop-up box with ...

If I close the window, restart Fiji, the DOS window does not come up. However, I get the same update suggestion. If instead I close Fiji and the DOS window, manually remove the ...
