Friction is a force that hinders the movement of bodies, slowing them down. It arises upon contact of real bodies sliding along each other. We describe friction as a force ...

[Submission guidelines](#) [Links and downloads](#) [Instruction for Authors](#) (Download pdf, 306 kB) [Template](#) (Download docx, 55 kB) [Open access publishing](#) To find out more about publishing ...

Friction will cease publication with Springer Nature on completion of Volume 12/2024. The journal will continue in cooperation with Tsinghua University Press from Volume 13/2025. Please ...

The reach of tribology has expanded in diverse fields and tribology related research activities have seen immense growth during the last decade. This review takes stock of the ...

Internal friction is a phenomenon that the mechanical vibration energy is irreversibly dissipated into the thermal energy due to some internal causes when an object is subjected to ...

Several correlations have been proposed in the literature to relate the friction angle of sands to the standard penetration test (SPT) N-values. However, most of these correlations ...

The friction coefficient, also commonly called the coefficient of friction, is a dimensionless quantity whose magnitude indicates the relative ease of initiating or sustaining relative motion between ...

Friction is a fundamental physical phenomenon of high technological importance for a wide range of applications. Since friction arises from the relative motion of two bodies put in ...

Background Reducing or controlling friction between moving parts is integral to a wide range of industries, including aerospace, over-the-road and off-road transportation, food machinery, ...

Friction will cease publication with Springer Nature on completion of Volume 12/2024. The journal will continue in cooperation with Tsinghua University Press ...
