Future trends of energy storage in Armenia

---

future (const future &) = delete; ~future (); future & operator =(const future &) = delete; future & operator =(future & &) noexcept; shared_future <R> share () noexcept; // ...

The class template std::future provides a mechanism to access the result of asynchronous operations: An asynchronous operation (created via std::async, ...

If the future is the result of a call to async that used lazy evaluation, this function returns immediately without waiting. The behavior is undefined if valid () is false before the call ...

If the future is the result of a call to std::async that used lazy evaluation, this function returns immediately without waiting. This function may block for longer than ...

Transfers the shared state of *this, if any, to a std::shared_future object. Multiple std::shared_future objects may reference the same shared state, which is not possible with ...

Checks if the future refers to a shared state. This is the case only for futures that were not default-constructed or moved from (i.e. returned by std::promise::get_future (), ...

The get member function waits (by calling wait ()) until the shared state is ready, then retrieves the value stored in the shared state (if any). Right after calling this function, valid ...

Specifies state of a future as returned by wait_for and wait_until functions of std::future and std::shared_future. Constants

The error: SyntaxError: future feature annotations is not defined usually related to an old version of python,

but my remote server has Python3.9 and to verify it - I also added it ...

Unlike std::future, which is only moveable (so only one instance can refer to any particular asynchronous result), std::shared_future is copyable and multiple shared future ...
