Do solar panels have a tariff?

In 2014, tariffs were expanded to solar panels assembled using Chinese or Taiwanese cells regardless of country of origin (U.S. ITA 2014, 2015). In 2018, a 30% tariff was imposed on all major solar product exporters to the U.S. (U.S. President 2018; U.S. Trade Representative 2019). This tariff declined 5% each year to reach 15% by 2021.

How are tariffs affecting the solar industry?

In April 2025, the U.S. administration implemented a series of tariffs affecting a broad range of imported goods, including critical components for solar energy systems. These tariffs, varying between 10% and 50% depending on the country of origin, have introduced new challenges for the solar industry, impacting both manufacturers and consumers.

Which solar companies do not incur import tariffs?

Other "Domestic" Suppliers: A few manufacturers with U.S.-based production or assembly - such as Hanwha Qcells (Georgia factories), First Solar (Ohio), Mission Solar (Texas), and Silfab (Washington) - do not incur these import tariffs on their U.S.-made panels. They have an effective price advantage now.

How will tariffs affect solar panels & inverters in 2025?

In summary, as of April 2025 we see solar panel prices up by 20-40% (depending on origin), inverters up ~10-30%, and battery costs up significantly (~30% or more) compared to pre-tariff levels. These increases correlate directly with the reciprocal tariff rates imposed (34% on China, 36-49% on SE Asia, etc.), underlining the tariffs' impact.

These tariffs, varying between 10% and 50% depending on the country of origin, have introduced new challenges for the solar industry, impacting both manufacturers and ...
