Dutch cyclists rode down the world's first bike path made entirely of discarded plastic this week, in a move aimed at reducing the millions of tonnes wasted every year.

Microgrids can step in when the main electricity grid fails. And as they can be powered by renewables, they are a sustainable and affordable option, too.

Expert insight on how countries around the world can build secure, equitable and sustainable infrastructure that underpins the global energy transition.

Pacific small island states, contributing only 0.03% of global emissions, are leading with ambitious renewable energy projects and net-zero goals by 2050.

Asia is a major economic engine but faces complex development challenges. Blended finance can help the continent build a sustainable and resilient future.

Tennessee's Chattanooga Metropolitan Airport recently became the first U.S. airport powered by 100 percent solar energy. Started in 2010, the \$10 million microgrid project ...

See how edge AI puts intelligence where it's needed most - at the edges of our power networks, working locally on or near the grid's sensors and devices.

Renewables-based microgrids and peer-to-peer (P2P) energy trading can boost energy security as they are self-sufficient and run independent of large grids.

Local communities generating their own power could become 90% energy self-sufficient, with potential to be

fully self-reliant in the future, according to a Dutch study.

Amid an electricity crisis, many Nigerian small businesses run on petrol generators. This solar-microgrid start-up is working to connect them to clean energy.
