Expert insight on how countries around the world can build secure, equitable and sustainable infrastructure that underpins the global energy transition.

Local communities generating their own power could become 90% energy self-sufficient, with potential to be fully self-reliant in the future, according to a Dutch study.

Microgrids can step in when the main electricity grid fails. And as they can be powered by renewables, they are a sustainable and affordable option, too.

Dutch cyclists rode down the world's first bike path made entirely of discarded plastic this week, in a move aimed at reducing the millions of tonnes wasted every year.

See how edge AI puts intelligence where it's needed most - at the edges of our power networks, working locally on or near the grid's sensors and devices.

Pacific small island states, contributing only 0.03% of global emissions, are leading with ambitious renewable energy projects and net-zero goals by 2050.

Tennessee's Chattanooga Metropolitan Airport recently became the first U.S. airport powered by 100 percent solar energy. Started in 2010, the \$10 million microgrid project ...

Renewable energy capacity grew by record amounts in 2024 - but it's still not enough to keep us on target for our energy transition goals.

Amid an electricity crisis, many Nigerian small businesses run on petrol generators. This solar-microgrid

start-up is working to connect them to clean energy.

Another successful microgrid and P2P energy project can be found in the town of Rock Port, Missouri. There, a community microgrid was established after a tornado destroyed ...
