-----

Base stations represent the main contributor to the energy consumption of a mobile cellular network. Since traffic load in mobile ...

Our objective is to demonstrate that mobile operators could use their existing infrastructure to participate in the reserve market of a contemporary power grid. Furthermore, ...

Power consumption models for base stations are briefly discussed as part of the development of a model for life cycle assessment. An overview of relevant base station power ...

Base stations represent the main contributor to the energy consumption of a mobile cellular network. Since traffic load in mobile networks significantly varies during a ...

We demonstrate that this model achieves good estimation performance, and it is able to capture the benefits of energy saving when dealing with the complexity of multi-carrier base stations ...

This study examines the energy requirements of a multi-tenant BTS, focusing on power consumption patterns, key energy-intensive components, and optimization strategies.

To meet the high requirements of the future mobile communication, 5G BS has three to four times higher power consumption with lower coverage area compared with 4G BS. ...

Base stations represent the main contributor to the energy consumption of a mobile cellular network. Since traffic load in mobile networks significantly varies during a working or weekend ...

This study develops a mathematical model and investigates an optimization approach for optimal sizing and deployment of solar photovoltaic (PV), battery bank storage ...

This study examines the energy requirements of a multi-tenant BTS, focusing on power consumption patterns, key energy ...

In the following paragraphs, the focus of the literature review will be concentrated on off-grid PV-wind-diesel-battery power supplies that were applied exclusively to mobile ...

In this work the electrical input power of macro and micro base stations in cellular mobile radio networks is characterized and quantified in dependence of the load level. The model ...
