An uninterruptible power supply (UPS) or uninterruptible power source is an electrical apparatus that provides emergency power to a load when the input power source or mains power fails.

The three significant factors to consider when setting up a UPS are the intended load (i.e., the combined voltage and amperage of all connected electronics), the capacity (i.e., maximum ...

This project, funded by the World Bank through the International Development Association (IDA), will enable Niger to better balance its energy mix, which is currently largely ...

Failing to secure the necessary environmental permits in Niger can result in significant penalties, including fines, operational delays, or even cessation of business activities.

An off-grid power system that delivers power to converted container buildings and container-based renewable energy systems designed to supply power to other buildings.

This project, funded by the World Bank through the International Development Association (IDA), will enable Niger to better ...

For projects in category A or B, it is necessary to submit a request for completion of the ESIA, together with the ToR of the study. For non-categorized projects, the application must be ...

Desert villages in Niger have long been plagued by insufficient power supply, especially because their remote locations are far away from the power grid. According to ...
