How do I sell excess energy back to the grid?

To get the most out selling excess energy back to the grid, you can use a combination of the tips and best practices below: More solar panels - The larger your solar PV array, the more energy you will be generating. Of course, this will cost more initially.

Can you sell solar power to the grid?

Although many people with solar systems on their homes or businesses think that they can sell excess electricity to the power grid, the reality is that you can only sell power to the grid if you have an electricity generator's license and qualified power-generating assets.

Should you sell electricity back to the grid?

The main benefit of selling electricity back to the grid is clear - you get paid for it. But there are other wider benefits too. Here's a rundown: Make money - Selling excess electricity back to the grid comes with a strong financial incentive. As a homeowner, it allows you to earn an additional income.

How do electricity generators make money?

Electricity generators earn profits by producing power at wholesale prices and selling them to the grid for a markup. Consumers, on the other hand, can also benefit financially from sending electricity back to the grid from solar systems or other distributed energy resources.

With the right setup and in the correct jurisdiction, your home's solar energy system can generate more electricity than you use, allowing you to sell this excess energy back to the grid.

Learn how to sell excess solar electricity back to the grid through net metering. Complete guide with state policies, earnings potential, and step-by-step process.
