The concept of superposition manifests both in classical and quantum physics. These both have their root in the linearity of the abstract vector spaces used in system ...

The discussion focuses on understanding the superposition principle in quantum mechanics, particularly how different wave functions ( $\psi_1$  and  $\psi_2$ ) relate to probability ...

I just wanted to know how they go about demonstrating a particle being in superposition of both spin up and down relative to some axis. OK, it probably cannot be done ...
