357 Function pointers in C can be used to perform object-oriented programming in C. For example, the following lines is written in C:

About `__func__`: "The identifier `__func__` is implicitly declared by the translator as if, immediately following the opening brace of each function definition, the declaration: `static ...`

Correction suggested by Guffa: The function is executed right after it's created, not after it is parsed. The entire script block is parsed before any code in it is executed. Also, parsing code ...

508 It's all about variable scoping. Variables declared in the self executing function are, by default, only available to code within the self executing function. This allows code to be written without ...

If a function is constructable, it can be called with `new`, i.e. `new User()`. If a function is callable, it can be called without `new` (i.e. normal function call). Functions created through function ...

I have a function whose structure is similar to the above. I want to abstract task 3 into a function, `bar()`, but I wish to limit the access of this function to only within the scope of `foo(a)`.

`(function(doc){ doc.location = "/"; })(document);`//This is passed into the function above As for the other questions about the plugins: Type 1: This is not a actually a plugin, it's ...

LINE 1: `select f(1);` ^ HINT: No function matches the given name and argument types. You might need to add explicit type casts. because there is no `f()` function that takes an integer as ...

A callback function is a function which is: accessible by another function, and is invoked after the first
