---

The landscape of energy in the United States is undergoing a significant transformation, with solar power and energy storage poised for remarkable growth by 2025.

Costs and growth of solar and storage. In 2025 there was just 2 GW of battery storage capacity installed, but by 2023 this grew to 89 GW - an increase of 4,350%, the UN ...

Still, solar and battery storage are booming Solar and storage accounted for 85% of the new power added to the grid in the first nine months of the Trump administration, ...

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record ...

According to a 2025 Cleanview report, the country installed a record-breaking 48.2 gigawatts (GW) of utility-scale solar, wind and battery storage capacity--a 47% increase over ...

US energy storage set a Q1 record in 2025 with 2 GW added, but looming policy changes could put that growth at serious risk.

"Energy storage was the second most deployed resource in Q1 2025, demonstrating its unique ability to be quickly built to address critical reliability needs." The ...

In another record-breaking year for energy storage installations, the sector has firmly cemented its position in the global electricity market and reached new heights. From ...

Annual solar capacity additions rose by 65% in 2024 compared to 2023 when the country added 19.5 GW. 62% of all new power capacity additions in the country came from utility-scale solar ...
