Are Chinese solar power inverters connected to critical infrastructure grids?

U.S. energy officials have launched an investigation after discovering unauthorized communication equipment embedded within Chinese-manufactured solar power inverters connected to critical infrastructure grids across the country.

Could remote inverters destabilize power grids?

Energy security experts warn that coordinated remote manipulation of these devices could destabilize power grids and trigger widespread blackouts, particularly as Chinese-made inverters now control a substantial portion of renewable energy capacity in the United States and Europe.

Will Chinese inverters affect European grids?

Some, like Florida Power & Light Company, are reportedly reducing their reliance on Chinese inverters, although the utility declined to comment. "Ten years ago, if you switched off the Chinese inverters, it would not have caused a dramatic thing to happen to European grids," said Philipp Schroeder, CEO of German solar developer 1Komma5.

Can communication devices evade firewalls & switch inverters off remotely?

Experts have warned that communication devices could evade firewalls and switch inverters off remotely, posing a huge risk to power grids, as they could change settings, damage energy infrastructure, destabilize the grid, and cause widespread blackouts.

Chinese companies are required by law to cooperate with China's intelligence agencies, giving the government potential control ...
