The main difference is the energy density. You can put more energy into a lithium-Ion battery than lead acid batteries, and they last much longer. That's why lithium-Ion batteries ...

Chinese start-up recycles lithium from EV batteries Botree Recycling dismantles spent lithium-ion batteries and uses patented low-cost chemical processes to extract key minerals such as ...

As the demand for lithium soars in the race to net zero, it is becoming increasingly important to address and secure a sustainable lithium future.

Lithium is one of the key components in electric vehicle (EV) batteries, but global supplies are under strain because of rising EV demand. The world could face lithium ...

Too many lithium-ion batteries are not recycled, wasting valuable materials that could make electric vehicles more sustainable and affordable. There is strong potential for the ...

The shift to electric vehicles and renewable energy means the demand for lithium ion batteries and the metals they are made from is set to increase rapidly. But at what cost?

Lithium is a lightweight metal used in the cathodes of lithium-ion batteries, which power electric vehicles. The need for lithium has increased significantly due to the growing ...

The Top 10 Emerging Technologies of 2025 report highlights 10 innovations with the potential to reshape industries and societies.

Around 60% of identified lithium is found in Latin America, with Bolivia, Argentina and Chile making up the
